Education Philosophy
(Indicate here overview of your own Education/Teaching Philosophy)

My educational philosophy is rooted in the principle that learning is a cumulative process. I believe that cognitive development is hierarchical, and the pursuit of complex analysis is only as effective as the foundation upon which it is built. While the ultimate goal of education is to cultivate Higher-Order Thinking Skills (HOTS), these skills are not independent of basic literacy and numeracy; rather, they are the sophisticated application of them.

Task 2

Observed practices/evidences of alignment/misalignment with your own Philosophy of Education/Teaching Philosophy against the school's philosophy/vision/mission/core values:

School Practice: **Pacing & Budget of Work** (***Misalignment***)
My philosophy holds that mastery must be sequential. However, the expectation to "push through" the curriculum regardless of learner readiness creates a gap where students are exposed to advanced topics without the requisite foundational "tools."

School Practice: **High-Stakes Testing (NAT)** [***Misalignment***]
There is a sharp disconnect between the HOTS-heavy NAT/Summative tests and the reality of "frustrated readers" in Grade 12. My philosophy argues that you cannot "evaluate" what you cannot "decode."

School Practice: **Promotion Practices** (***Misalignment***)
The "unspoken" pressure to pass students who lack functional literacy/numeracy contradicts the "Foundations First" mandate. This leads to a "hollow" progression where students reach higher grades (8–10) without the skills to survive them.

School Practice: **ARAL Program** (***Alignment***)
The existence of the ARAL program (Math/Reading) shows an institutional recognition of the problem. This aligns with my philosophy, as it carves out dedicated time to address the "roots" of learning.

School Practice: **COT Feedback (HOTS focus)** [***Misalignment***]
The feedback criticizing teachers for "lingering" on recall/basics suggests that the observation system values the appearance of high-level activity over the reality of foundational skill-building.

Task 3

What do you think are the perceived Effects to you . . .

If well-aligned…	*If misaligned…*
I mostly don't appreciate ARAL program as there are high rates of absenteeism from these programs. But if this were fully executed, then it will truly be a big help to students who are struggling with literacy and numeracy skills.	Just like how I feel right now, I feel like I am committing a moral injury that goes against my philosophy. Education and teaching becomes bureaucratic work, as we do everything for the sake of compliance. I feel burned out, feeling that I have never done anything right.
Proposed actions to sustain your practice	**Proposed actions to improve your practice**
I wish to encourage students to join ARAL program on at least satisfactory outcomes or at least provide the teachers some feedback after class that can help the ARAL teachers to personalize their strategies for each of the following students.	I have to change my mindset and approach if I were to stay in DepEd. I have to adopt and appreciate their pedagogical standards in order to survive and be compliant with them.
