Worksheet 1: Performance Task

GROUP 1

Members:
1.) Aliven, Juan Carlos
2.) Aparace, Cathlyn Mae
3.) De Castro, Jhona Paula
4.) Evardo, John Ezekiel

Instruction: You will develop a performance task for your students, considering that you will teach a topic in flexible modality.

Title of the Topic:	Sustainable Crop Production Practices
Area:	TVL – Agriculture
Grade level:	10
Quarter:	Quarter 3
Competencies with code:	1. **AGR10-IIIb-1:** Demonstrate proper soil preparation, planting, and maintenance techniques for selected crops.
	2. **AGR10-IIIb-2:** Apply integrated pest management and sustainable practices in crop production.
	3. **AGR10-IIIb-3:** Monitor, evaluate, and report crop growth and productivity using data collection and analysis.
Title of the performance task:	"Integrated Sustainable Crop Production Project"
Time allotment for the task:	4 weeks

Description of the task that targets the identified competencies.
Discuss clearly the outputs of the students.

Description of the Task:

Students will plan, implement, and monitor a small-scale sustainable crop production project. This task is designed to develop competencies in planning, problem-solving, collaboration, environmental stewardship, and digital or written documentation. Students may choose to conduct the project at home, in a school garden, or through a community partnership.

The task requires students to:

1.) **Plan –** Identify the type of crop, prepare the soil, select appropriate planting techniques, and schedule maintenance activities.
2.) **Implement –** Plant the crops, apply sustainable farming practices (such as proper watering, organic pest control, and resource management), and maintain the crops regularly.
3.) **Monitor and Evaluate –** Observe plant growth, document challenges, and reflect on the effectiveness of their practices, making adjustments as needed.

Student Outputs:

The outputs will include:

1.) **Project Plan –** A written or digital plan detailing the selected crop, materials, timeline, and sustainability practices.

2.) **Progress Documentation –** Daily or weekly records of activities, growth observations, photos, videos, or journals showing the development of the crops.

3.) **Final Report/Reflection –** A summary of the project outcomes, lessons learned, challenges faced, and recommendations for future crop production projects.

4.) **Presentation –** Students may present their project through a poster, slide presentation, or digital portfolio, showcasing their process and results.

This task not only assesses the students' ability to apply theoretical knowledge in a real-world context but also strengthens their critical thinking, creativity, collaboration, and accountability skills, aligning with the identified competencies.

Student Guide: Suggested Weekly Tasks

Week 1: Project Planning and Preparation
Objective: By the end of Week 1, students will complete a feasible crop production plan and prepare the planting site.

Suggested Tasks:
1.) Crop Selection and Planning (Day 1–2)
- Select one crop suitable for local conditions (e.g., pechay, kangkong, okra, herbs).
- Identify planting location and available resources.
- Prepare a simple Project Plan including crop type, materials, timeline, and sustainability practices.

Measurable Output:

- 1–2 page written or digital Project Plan

2.) Site and Materials Preparation (Day 3–5)

- Prepare containers or garden plots (cleaning, soil preparation, drainage).
- Apply compost or organic fertilizer if available.
- Label planting area or containers.

Measurable Output:

- Photo documentation of prepared site
- Short preparation log (3–5 sentences)

Week 2: Planting and Initial Care
Objective: By the end of Week 2, students will successfully plant crops and begin proper maintenance.

Suggested Tasks:

1.) Planting Activity (Day 6–7)

- Plant seeds or seedlings using proper depth and spacing.
- Water plants immediately after planting.
- Label with crop name and planting date.

Measurable Output:

- Planting log with date and method
- Photos of planted crops

2.) Initial Monitoring (Day 8–10)

- Water plants regularly as scheduled.
- Observe early signs of germination or growth.

Measurable Output:

- Daily observation log (at least 3 entries)

Week 3: Monitoring, Maintenance, and Problem-Solving
Objective: By the end of Week 3, students will monitor growth and apply solutions to any problems encountered.

Suggested Tasks:

1.) Growth Monitoring (Day 11–15)

- Measure plant height or count leaves every 2–3 days.
- Observe pests, diseases, or nutrient deficiencies.

Measurable Output:
- Growth Monitoring Table (with dates and measurements)
- Photo evidence

2.) Sustainable Intervention (Day 16–18)
- Apply at least one sustainable practice (e.g., organic pest control, mulching, water conservation).
- Record actions taken and results.

Measurable Output:
- Short written reflection (5–7 sentences) describing the intervention

Week 4: Evaluation, Reflection, and Reporting
Objective: By the end of Week 4, students will evaluate project results and reflect on learning.

Suggested Tasks:

1.) Final Observation or Harvest (Day 19–23)
- Harvest crops if ready, or document the current growth stage.
- Compare results with the original plan.

Measurable Output:
- Final photos or short video
- Harvest or progress summary

2.) Final Project Report and Reflection (Day 24–28)
- Prepare a Final Project Report including:
  - a.) Overview of the project
  - b.) Weekly activities completed
  - c.) Challenges and solutions
  - d.) Lessons learned and recommendations

Measurable Output:
- Written report (2–3 pages) or digital portfolio
- Reflection question answered:

"How did this project help you understand sustainable crop production and responsible food production?"

Reflective guide in developing the performance task:

1. How will the task target the identified competencies in a flexible *learning environment*?
2. Are you sure that the behaviors that will be observed are measurable using a tool?
3. Is the time allotment for the task enough for you to target the competencies?
4. Does the task show direct application of knowledge in real-life?
5. Does the task also target higher-order thinking skills?

This is how you will be rated in this worksheet. Please attach this to your output.

Criteria	4* Outstanding	3 Very Satisfactory	2 Satisfactory	1 Needs Improvement
Content (75%) The performance task . . . 1. targets the stated learning competencies 2. involves the application of knowledge in real-life 3. challenges students' thinking and creativity skills 4. includes contextualized activities 5. enhances students' understanding of the lesson 6. can be done within reasonable time	ALL of the given indicators of an outstanding output are evident, and nothing else.	Only 1 of the given indicators of an outstanding output is not evident; or 1 identified indicator should not be there.	Only 2-3 of the given indicators of an outstanding output are not evident; or 2-3 identified indicators should not be there; or 1 given indicator of an outstanding output is missing **AND** 1 given indicator should not be there.	Four to 5 of the given indicators of an outstanding output are not evident; or 4-5 identified indicators should not be there; or 2-3 of the given indicators of an outstanding output are not evident **AND** 2-3 identified indicators should not be there
Construction (20%) The performance task is SMART. 1. S – Specific 2. M – Measurable 3. A – Attainable 4. R – Relevant 5. T – Time-bound	ALL of the given indicators of an outstanding output are evident.	Only 1 of the (SMART) given indicators of an outstanding output is not evident.	Only 2-3 of the given indicators of an outstanding output are not evident.	Four to 5 of the given indicators of an outstanding output are not evident.

Promptness of Submission (5%)	The output is submitted on or before the deadline.	The output is submitted one-three days after the set deadline.	The output is submitted four to seven days after the deadline.	The output is submitted eight or more days after the deadline.

** To obtain the WS score, the weighted score will be multiplied to 3. Maximum score is 12.*
